

Storage, handling and repackaging recommendations for water soluble pillows and Pouches

Storage and Handling:

- Do not handle the product with wet hands or wet gloves.
- Keep away from moisture.
- Re-close the inner and outer containers (when applicable) after each use.
- Keep out of reach of children and pets.
- Store between 68° and 95° F (20° to 35° C).
- Exposure to air may cause the film to harden. This is normal and does not affect the product stability or performance.
- If a pillow bursts, the gel released will not damage other pillows. Clean the affected pillows with a dry cloth. Do not use water.

The product has been tested for 5 cycles of freezing/thawing and 42 days at 38 °C (100.4 °F) at 10% Relative Humidity and 80% Relative Humidity, and was found stable in all studied environments. It also passed the solubility time test at 10 °C (50 °F).

Repackaging Precautions:

When re-packaging the bulk keep in mind all the above mentioned recommendations. In addition:

- The product has been tested to withstand a minimum of 30 lbs per square inch. We, in connection with our very experienced packager, have designed our package to prevent pillows accidentally bursting. If you plan to purchase the product and repackage it in other containers, please check your packaging configuration to assure compatibility. For example, do not stack pillows too high in a container or stack cases too high unless the case is rigid enough. Excess pressure on the bottom pillows can cause bursting.
- When re-packaging and reselling we recommend marking the boxes or any other package according to the regulations amending the CLP (containers, labels and packaging) issued by the European Commission to govern liquid laundry detergent capsules in soluble films. We can provide our modified version of the document for your use.
